CS23A34

USER INTERFACE DESIGN

EXPERIMENT 5A

ROLL NO:240701326

NAME:I MOHAMMED HAMZA

AIM:

To simulate the lifecycle stages for UI design using the RAD model and develop a small interactive interface using Axure RP.

PROCEDURE:

Tool Link: https://www.axure.com/

Simulating the Lifecycle Stages for UI Design Using the RAD Model:

RAD Model (Rapid Application Development): The RAD model emphasizes quick development and iteration. It consists of the following phases:

1. **Requirements Planning:**

- Gather initial requirements and identify key features of the UI.
- Engage stakeholders to understand their needs and expectations.

2. User Design:

- Create initial prototypes and wireframes.
- Conduct user feedback sessions to refine the designs.
- Use tools like Axure RP to develop interactive prototypes.

3. Construction:

- Develop the actual UI based on the refined designs.
- Perform iterative testing and feedback cycles.

4. Cutover:

- Deploy the final UI.
- Conduct user training and support.

Axure RP Interactive Interface Development:

Phase 1: Requirements Planning

1. Identify Key Features:

- Navigation (Home, Product Categories, Product Details, Cart, Checkout, Order Confirmation, Order History)
- User actions (Browsing, Searching, Adding to Cart, Checkout, Tracking Orders)

2. Create a Requirements Document:

- List all features and functionalities.
- Document user stories and use cases.

Phase 1: Requirements Planning

1. Identify Key Features:

Identify Key Features:	Create Requirements Document
• Navigation: Home, Product Categories, Product Details, Cart, Checkout, Order Confirmation, Order History • User Actions: Browsing, Searching, Adding to Cart, Checkout, Tracking Orders	• List all Features & Functionalities • Document User Stories & Use Cases.

Features & Functionality	User Stories & Use Cases
• Home Page • Product Categories • Product Detail Page • Shopping Cart • Checkout Process • Order Confirmation • Order History	• As a user, I want to browse products by cate- • As a user, I want to search for products by keywords. • As a user, I want to add items to my shoppi-ng cart. • As a user, I want to complete the checkout process. • As a user, I want to view my order confirma-tion. • As a user, I want to track my orders.

2. Create a Requirements Document:

Features & Functionality	User Stories & Use Cases
• Home Page • Product Categories • Product Detail Page • Shopping Cart • Checkout Process • Order Confirmation • Order History	• As a user, I want to browse products by category. • As a user, I want to search for products by keywords. • As a user, I want to add items to my shopping cart. • As a user, I want to complete the checkout process. • As a user, I want to view my order confirmation. • As a user, I want to track my orders.

Phase 2: User Design

1. Install and Launch Axure RP:

- Download and install Axure RP from Axure's official website.
- Launch the application.

2. Create a New Project:

- Go to File -> New to create a new project.

- Name the project (e.g., "Shopping App Interface").

3. Create Wireframes:

- Use the widget library to drag and drop elements onto the canvas.
- Design wireframes for each screen:

a) Home Page
b) Product Categories
c) Product Listings
d) Product Details
e) Cart
f) Checkout
g) Order Confirmation
h) Order History

4. Add Interactions:

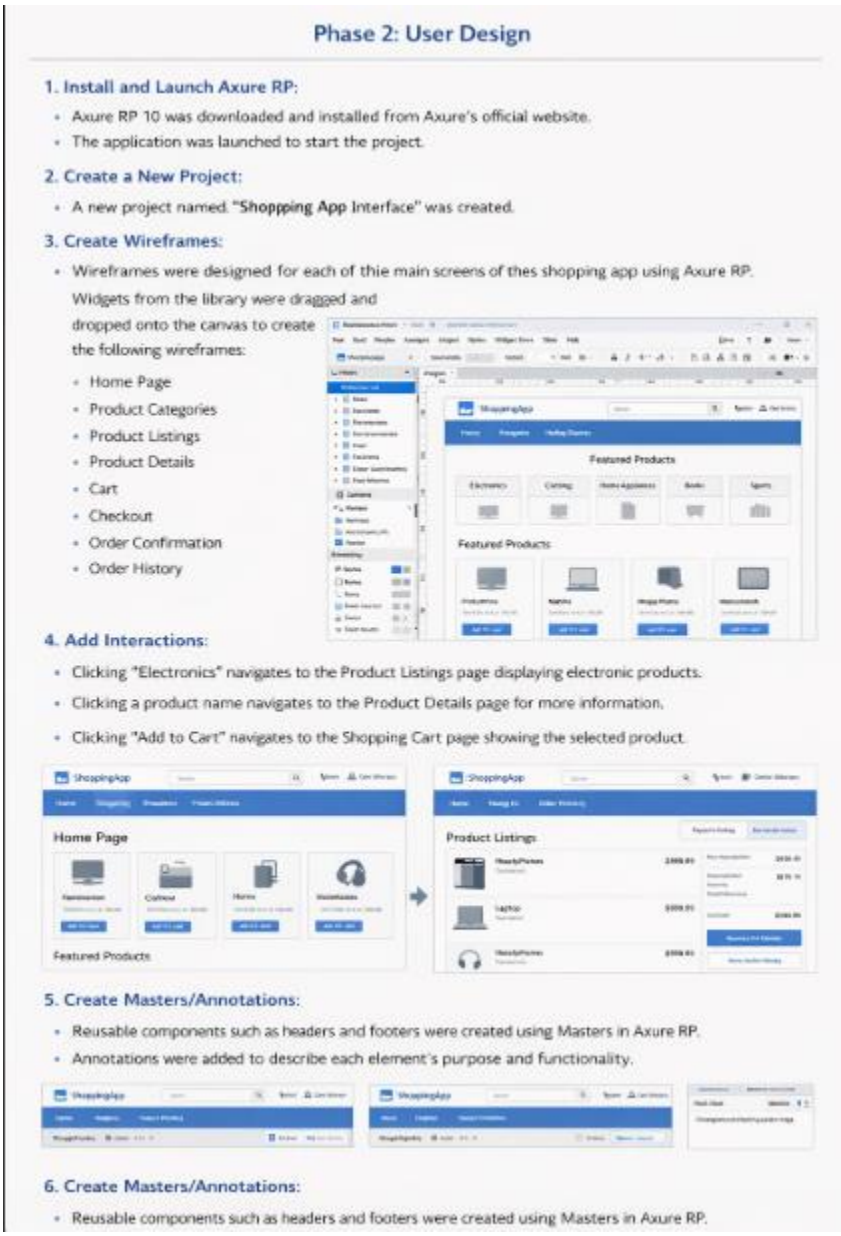
- Select an element (e.g., button) and go to the Properties panel.
- Click on Interactions and choose an interaction (e.g., OnClick).
- Define the action (e.g., navigate to another screen).

5. Create Masters:

- Create reusable components (e.g., headers, footers) using Masters.
- Drag and drop masters onto the wireframes.

6. Add Annotations:

- Add notes to describe each element's purpose and functionality.
- Use the Notes panel to add detailed annotations.



Phase 2: User Design

1. Install and Launch Axure RP:

- Axure RP 10 was downloaded and installed from Axure's official website.
- The application was launched to start the project.

2. Create a New Project:

- A new project named "Shoppping App Interface" was created.

3. Create Wireframes:

- Wireframes were designed for each of thie main screens of thes shopping app using Axure RP. Widgets from the library were dragged and dropped onto the canvas to create the following wireframes:
  - Home Page
  - Product Categories
  - Product Listings
  - Product Details
  - Cart
  - Checkout
  - Order Confirmation
  - Order History

4. Add Interactions:

- Clicking "Electronics" navigates to the Product Listings page displaying electronic products.
- Clicking a product name navigates to the Product Details page for more information.
- Clicking "Add to Cart" navigates to the Shopping Cart page showing the selected product.

5. Create Masters/Annotations:

- Reusable components such as headers and footers were created using Masters in Axure RP.
- Annotations were added to describe each element's purpose and functionality.

6. Create Masters/Annotations:

- Reusable components such as headers and footers were created using Masters in Axure RP.

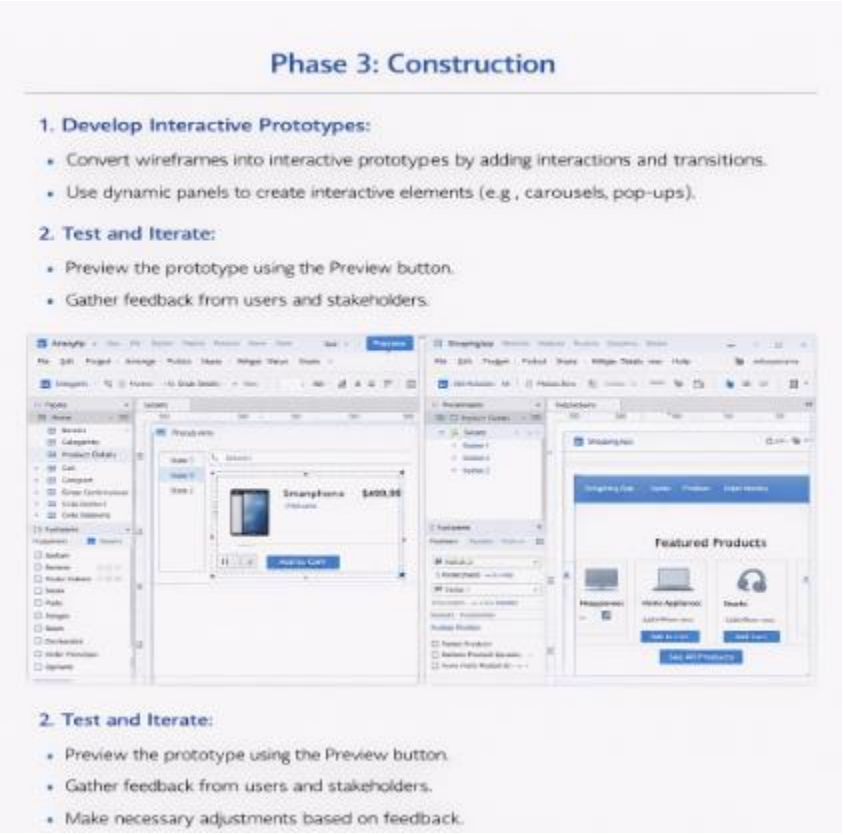
Phase 3: Construction

1. Develop Interactive Prototypes:

- Convert wireframes into interactive prototypes by adding interactions and transitions.
- Use dynamic panels to create interactive elements (e.g., carousels, pop-ups).

2. Test and Iterate:

- Preview the prototype using the Preview button.
- Gather feedback from users and stakeholders.
- Make necessary adjustments based on feedback.



Phase 4: Cutover

1. Finalize and Export:

- Finalize the design and interactions.

- Export the prototype as an HTML file or share it via Axure Cloud.

2. User Training and Support:

- Conduct training sessions to familiarize users with the new interface.
- Provide documentation and support for any issues.
