CS23A34
USER INTERFACE DESIGN
EXPERIMENT-4A

ROLL NO: 240701326

NAME: MOHAMMED HAMZA

Aim

To analyze the user interaction process in a food ordering platform and represent it using a user flow diagram in Lucidchart.

User Flow Description

1. App Launch

- **Start**
- **Open the app**
- **Enter / Confirm location**
- **Search restaurants or food items**

2. Food Selection

- **View available restaurant**
- **Select restaurant**
- **View menu (price, ratings, availability)**
- **Select food items**
- **Add items to cart**

3. Order Details & Checkout

- **Review cart items**
- **Enter delivery details (address, contact)**
- **Proceed to checkout**

4. Login Decision

- **If not logged in → Log in / Sign up**
- **If logged in → Confirm contact details**

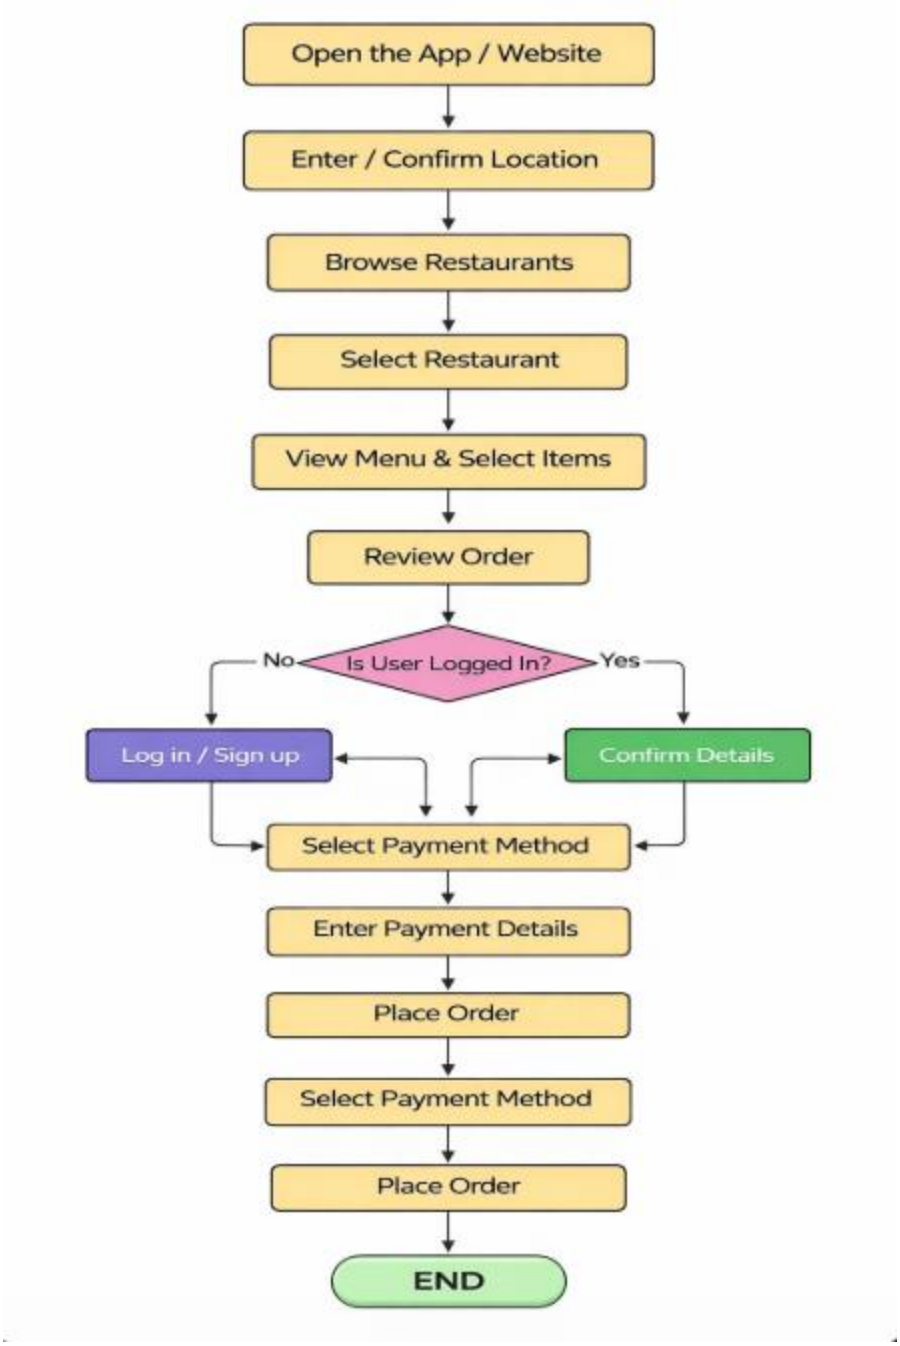
5. Payment Process

- **Select payment method**
- **Enter payment details**
- **Place order**
- **Order confirmation (Order ID generated)**

Conclusion

The experiment demonstrates how a structured user flow improves clarity and usability in a food ordering system**. The login decision ensures user authentication before payment. Proper step-by-step navigation from restaurant selection to payment confirmation enhances user experience and ensures successful order placement.**

FLOWCHART



Open the App / Website
Enter / Confirm Location
Browse Restaurants
Select Restaurant
View Menu & Select Items
Review Order
Is User Logged In?
No
Yes
Log in / Sign up
Confirm Details
Select Payment Method
Enter Payment Details
Place Order
Select Payment Method
Place Order
END
